NEXTERA PULSE · FRONTEND

Dashboard UI feedback

What still needs attention on the live dashboard, set against the Learning workspace frames. The light Mentor, Product, Phone, and Student pages are the target. The dark repo page and the running app are the current build.

> Match the light frames' type, spacing, and structure. Do not restyle the current dark screen and call it done.

Target frames

- Student — node 82-3
- Mentor — node 82-4
- Product — node 82-5
- Phone — node 82-6

Current build

- Repo · Dark — node 103-2
- Running app, captured 12 Nov 2026

How to read this

Each point is something still wrong on the dashboard, then the frame to follow. Two notes from review are intentionally not in this document: the static “Good morning, Mentor” line, and any suggestion to disable an action and label it view-only.

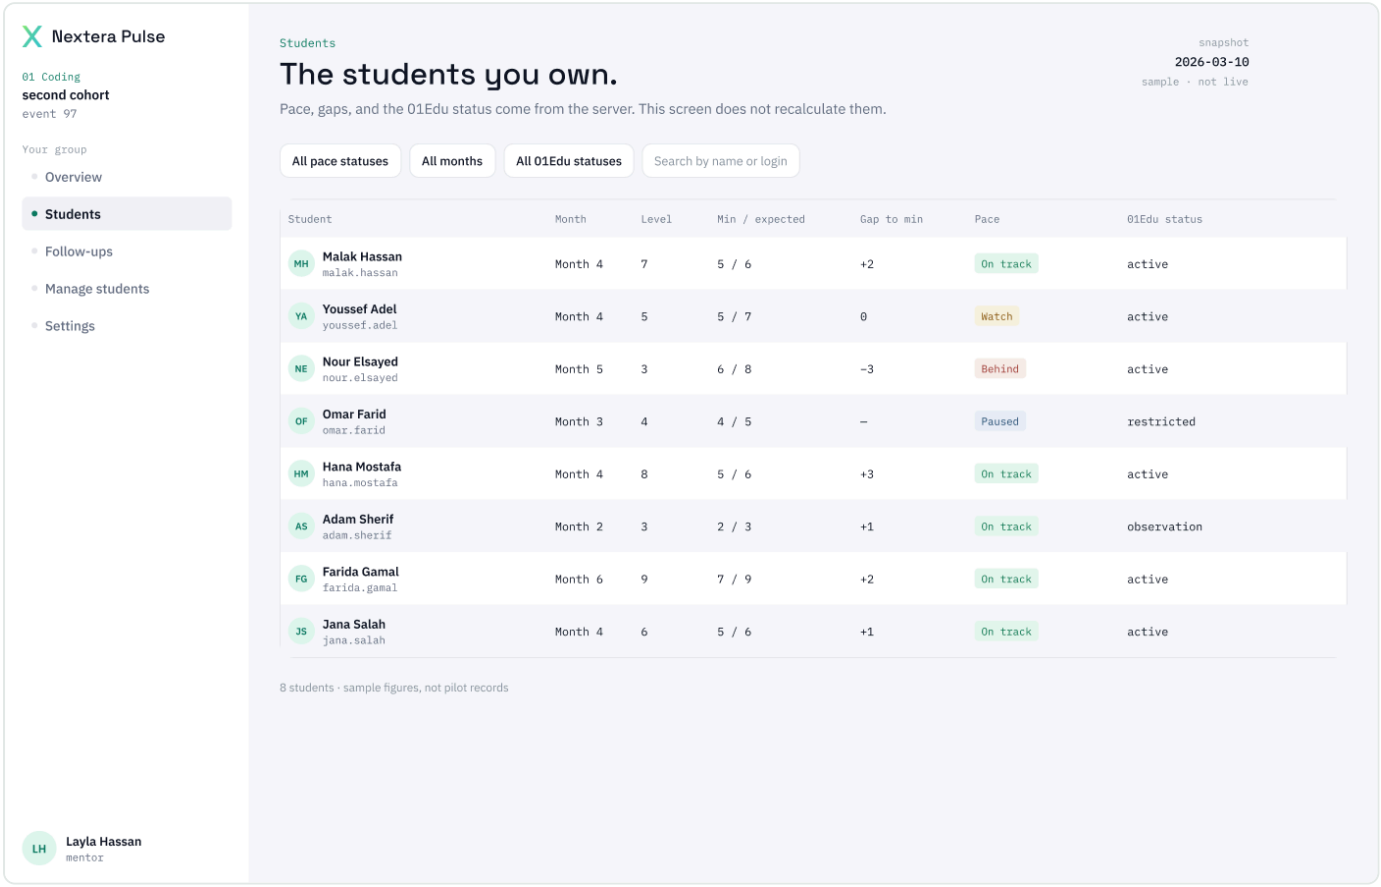

CHANGE	FOLLOW
Laptop navigation: full sidebar, or hidden. No icon rail.	Mentor overview, Student pace
Phone: bottom bar with the page names.	Phone “My pace”
Projects as a named set.	Student project, phone project
Histogram by level. Hover lists the students under the bar.	“Levels in your group” on the Student project frame. Cohort shape for mentor rates.
Replace the green load sliders.	Student pace line. One segmented bar on Mentor overview.
Remove Help.	Not on Mentor, Product, or Phone.
One logout, not inside the account chip.	Light frames: the chip is a name and a role.
Remove My profile as a workspace page.	Mentor, Product, and Phone do not use it.

1. Actions that look saved are not saved

Removing a follow-up only changes the list on screen. Unassigning a student in the live app does not call the API. A refresh brings the old data back. Manage students still tells people to create accounts under Accounts & access, and that page is hidden while the live API is on.

Save those actions through the API. The Mentor students frame already says pace, gaps, and 01Edu status come from the server, and that this screen does not recalculate them.

TARGET · MENTOR STUDENTS

Mentor → “The students you own.” Filters, a quiet table, and a line that the numbers come from the server.

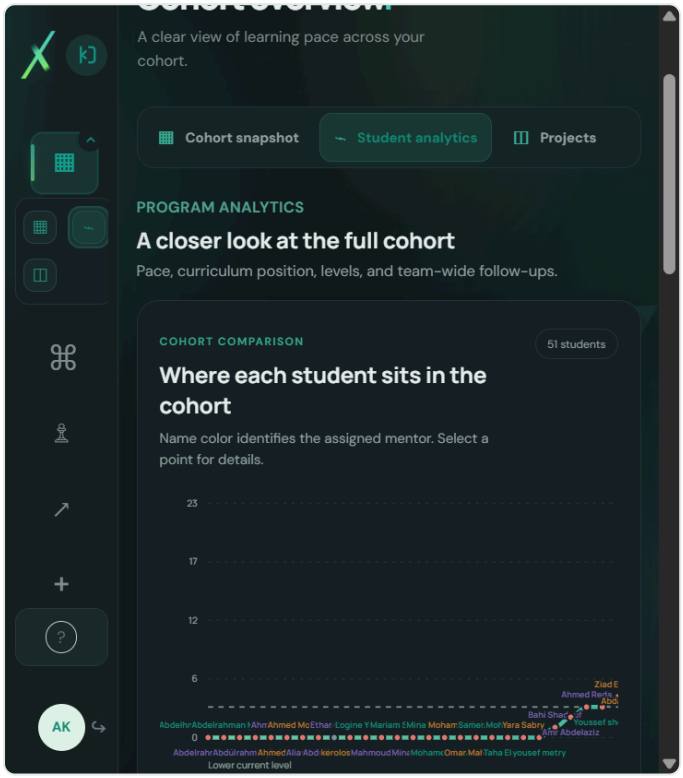

2. Replace the cohort curve with a histogram

The live chart draws every student as a named point. With 51 students the names pile up on the baseline and the right edge, so the chart cannot be read.

Use one bar per level, as in “Levels in your group” on the Student project frame. Hovering or focusing a bar lists the students at that level underneath, in a grid: name, mentor, pace. No names on the chart.

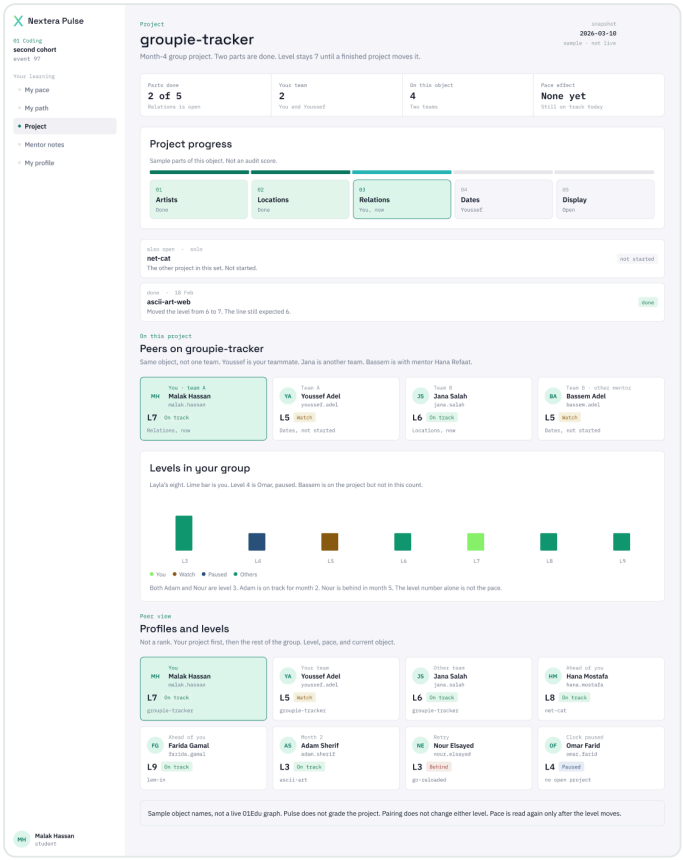

The Product “Cohort shape” frame is the other pattern: one bar per mentor for the on-track rate, with the count written beside it.

CURRENT · LIVE ANALYTICS

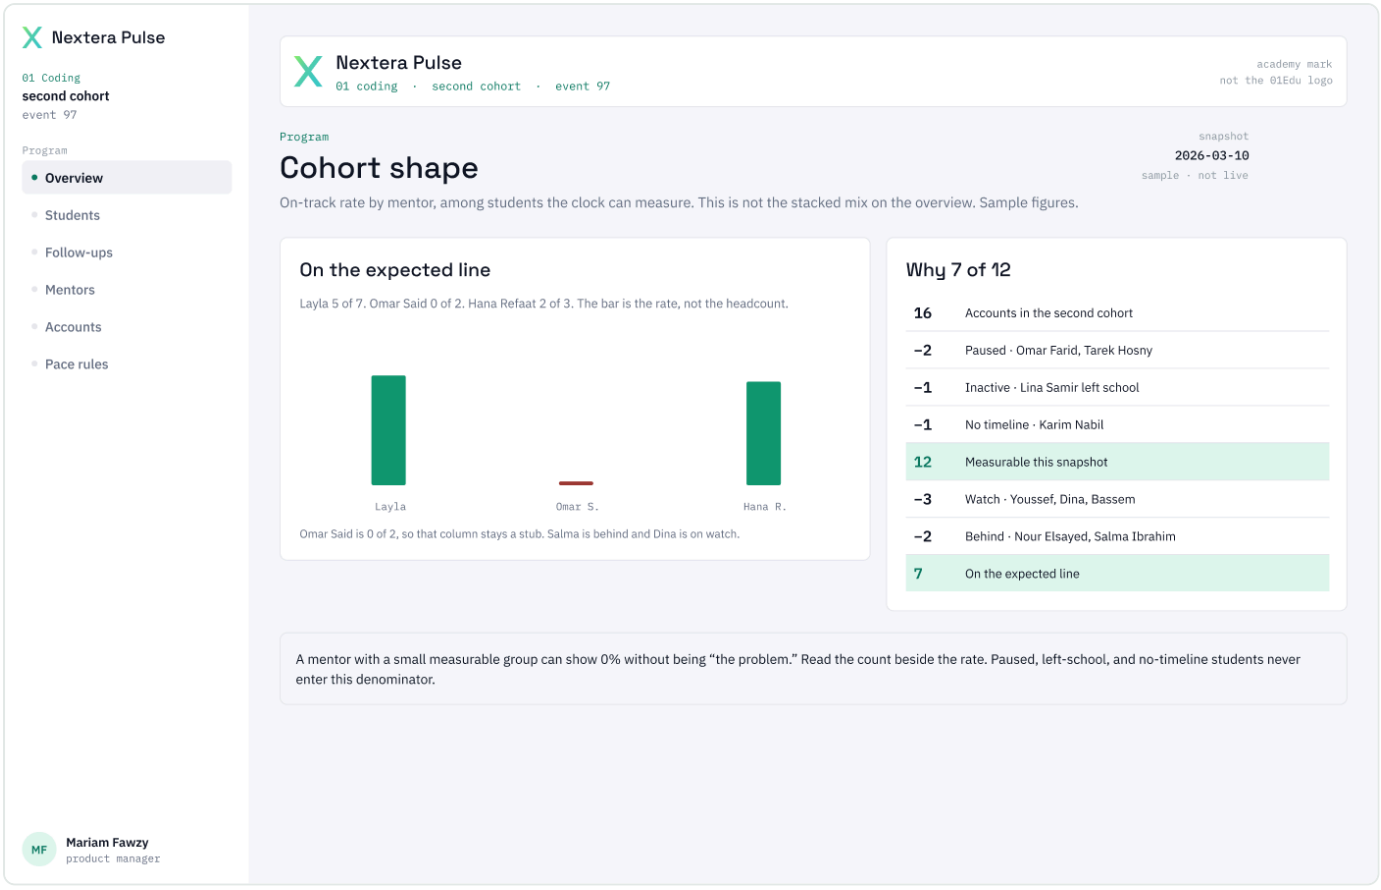

Names collide. The collapsed icon rail, the “?” help control, and logout inside the avatar are on the same screen.

TARGET · LEVELS AS BARS

Student project. Bars by level, then the people arranged in cards underneath.

TARGET · PRODUCT COHORT SHAPE

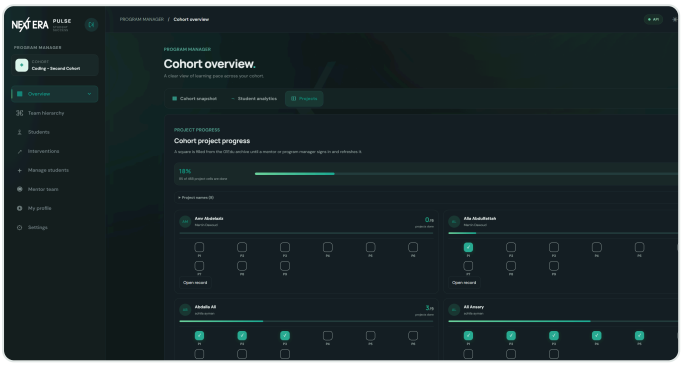

One bar per mentor. The rate is labeled. Paused, left-school, and no-timeline students stay out of the denominator, and that rule is written on the page.

3. Projects should be a named set

The live screen is a card of empty boxes labeled P1, P2, P3. The real project name sits behind “Project names”.

Follow the Student project frame: 01 Artists, 02 Locations, 03 Relations, each with a status, as one set. On the phone, the same set is a short list: number, name, status.

CURRENT · PROJECT SQUARES

P1–P9 squares. The name of the project is not what you scan.

TARGET · PHONE PROJECT LIST

Nextera Pulse
01 coding · event 97

groupie-tracker

2 of 5 parts done. Your level stays 7 until the project moves it.

01	Artists	Done
02	Locations	Done
03	Relations	You, now
04	Dates	Youssef
05	Display	Open

On this project

MH	Malak Hassan	L7 · Relations, now	On track
YA	Youssef Adel	L5 · Dates, not started	Watch
JS	Jana Salah	L6 · Locations, now	On track
BA	Bassem Adel	L5 · Dates, not started	Watch

Your group has 8 profiles on the desktop project screen. Adam and Nour are both level 3. Only Nour is behind.

Phone project. Number, name, and status in one list, then the people on that project.

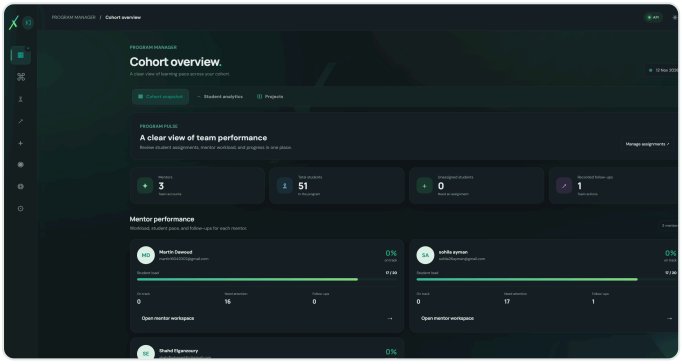

4. Sidebar: open or hidden. On a phone, a bottom bar

The collapsed rail is an icon strip. Labels disappear, and help and logout are hard to hit.

On a laptop, follow the Mentor and Product sidebars: always the full width, with words (Overview, Students, Follow-ups, Manage students, Settings). Either show that sidebar or hide it. No half-width icon mode.

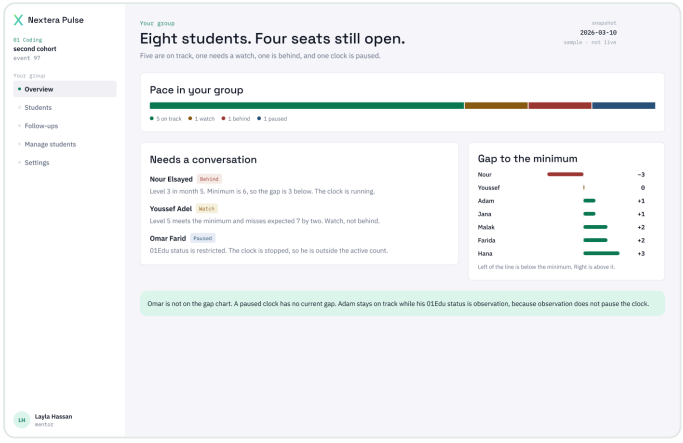

On a phone, follow the Student phone frame: drop the drawer and put the pages in a bottom bar (Pace, Path, Notes). The mentor phone roster is a stacked list with All / Behind / Watch, which is the right shape for a long student list. Give that screen the same bottom bar so the other pages stay reachable.

CURRENT · ICON RAIL

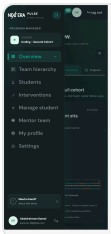

Collapsed laptop sidebar. Icons only, and the load tracks on every mentor card.

TARGET · MENTOR OVERVIEW

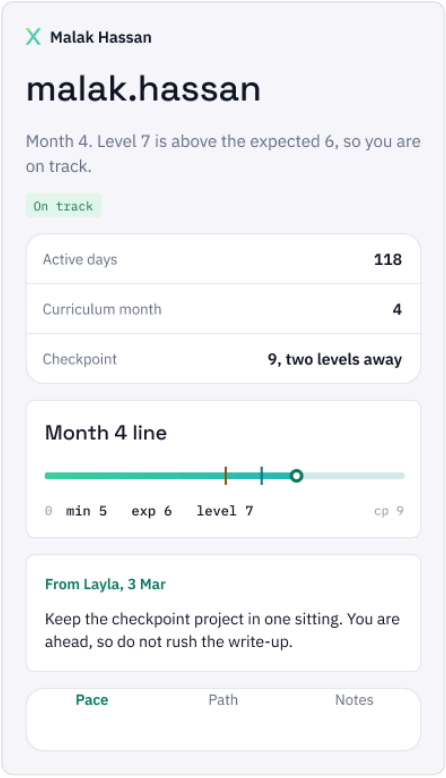

Full sidebar with words. One pace bar for the group, then a written list of who needs a conversation.

CURRENT · PHONE

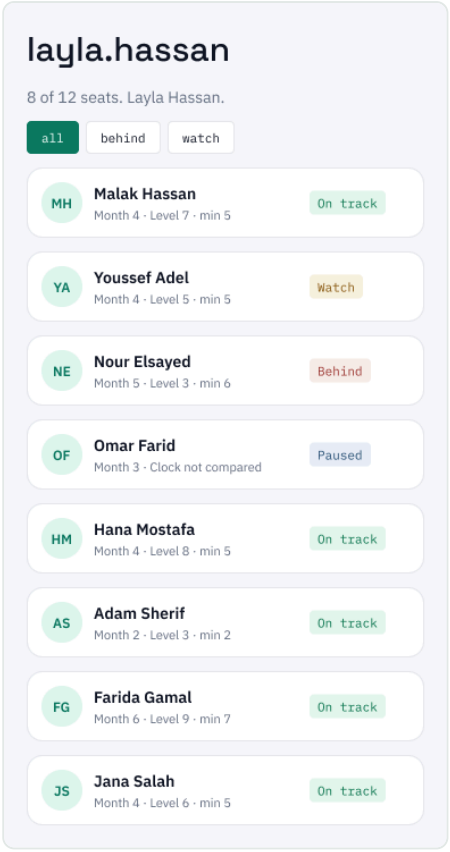

The drawer covers the page. Help and the account chip sit in the sidebar. There is no bottom bar.

PHONE PACE

Bottom bar: Pace, Path, Notes. The pace line is a thin track with ticks.

PHONE ROSTER

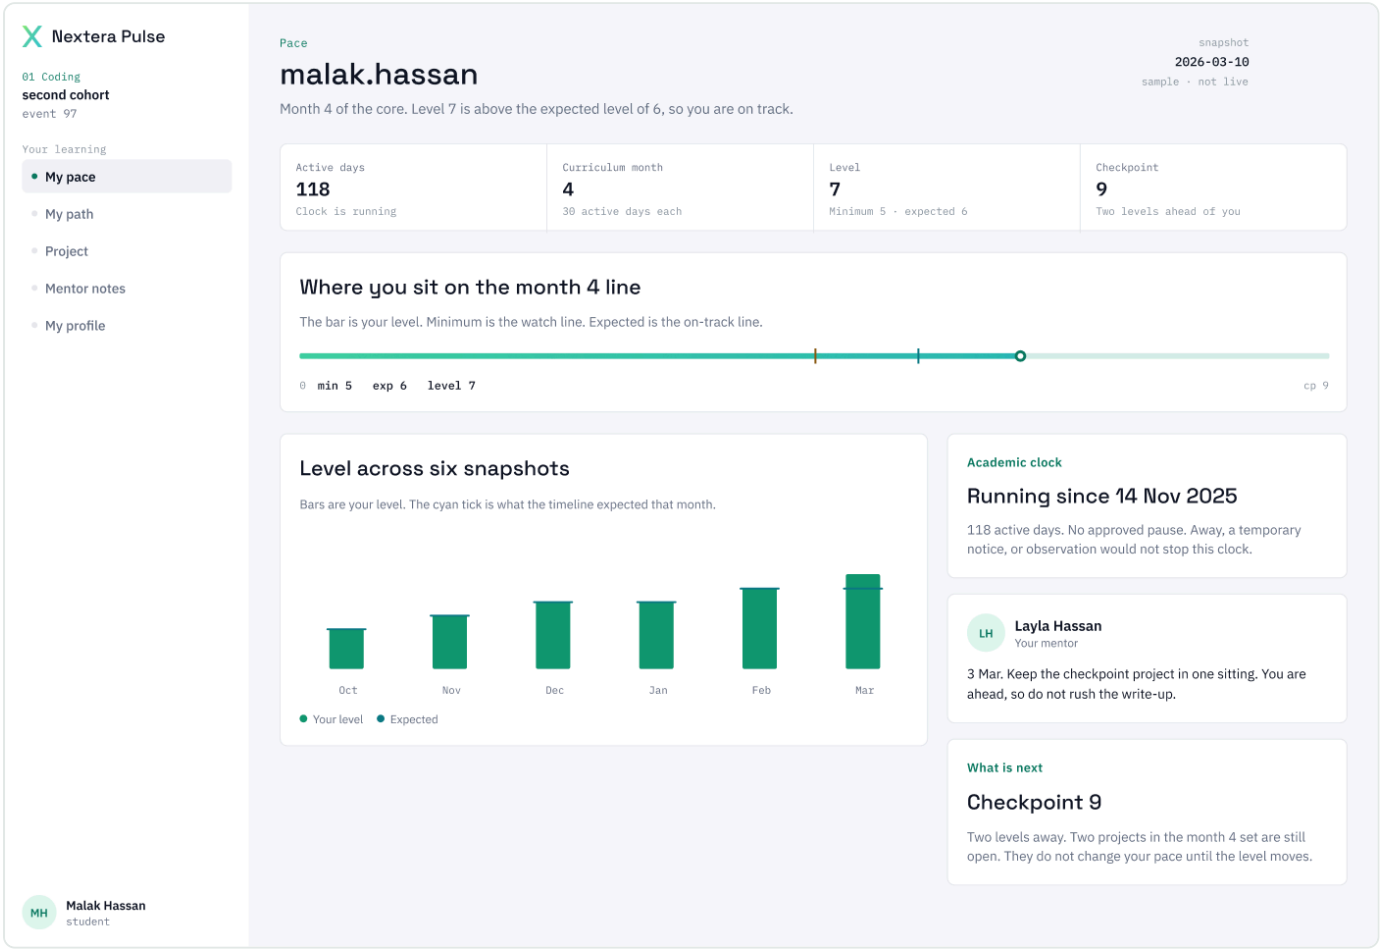

Mentor phone. A stacked list with All, Behind, and Watch. No side drawer.

5. Layout and alignment

Cards, the chart, and the project grid stop lining up as the window gets narrower. At a phone width the side menu covers the page and the content is squeezed into a strip beside it.

Review alignment on the dashboard, the student table, projects, and analytics against the Mentor students table and the phone list. If a screenshot is not enough to judge a screen, ask for a short in-person review rather than guessing the spacing.

TARGET · STUDENT PACE, DESKTOP

One column of content, a four-part stat row, a labeled pace line, then a bar chart beside short notes. This is the alignment to aim for.

6. Logout

Log out is a small arrow inside the profile button, plus a second “Log out” in the top bar. On a narrow screen those collide with the notification badge.

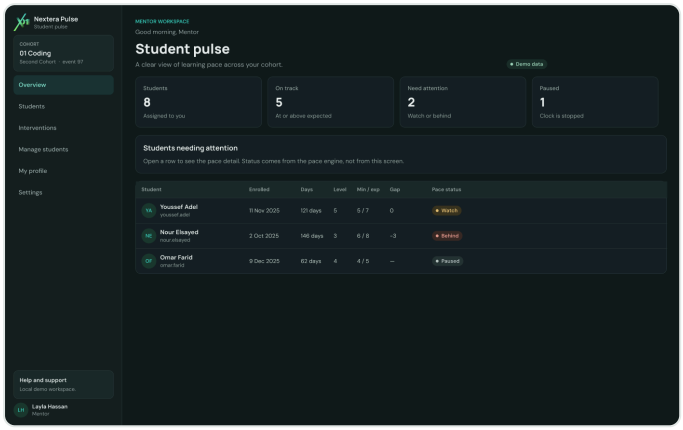

The light frames do not put logout inside the account chip. The chip is a name and a role. Keep one logout control, with a label, and do not nest it inside another button.

The live shots in sections 2 and 4 show the arrow sitting on the avatar, and “Log out” in the top bar on the phone width.

7. Remove Help

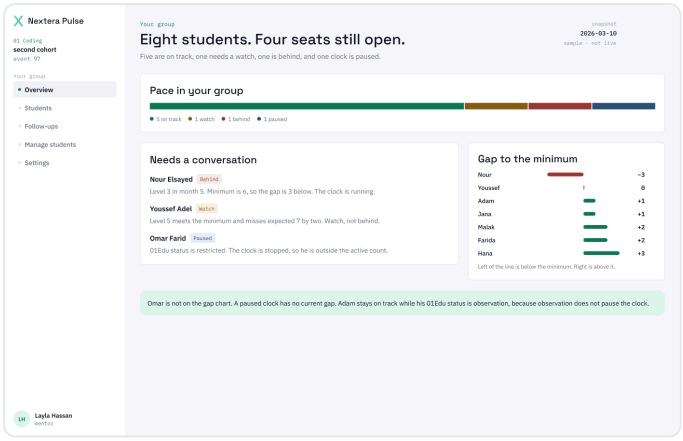

“Need a hand? / About this demo” is still in the live sidebar. The dark repo frames say “Help and support / Local demo workspace.” It is not on the Mentor, Product, or Phone pages. Remove it.

CURRENT · DARK REPO OVERVIEW

Help and support at the bottom of the sidebar, and a Demo data badge in the header.

TARGET · NO HELP BLOCK

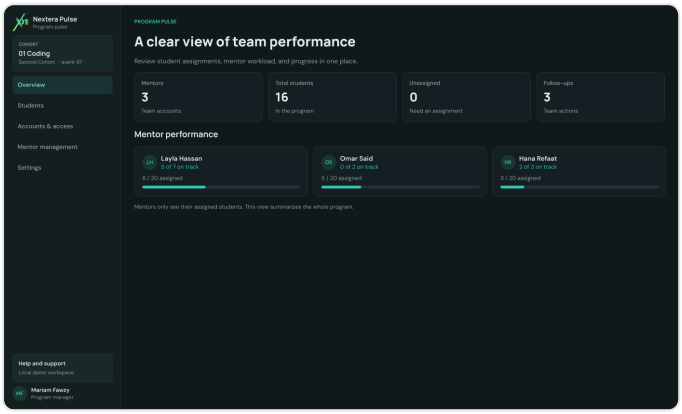

The account chip is the last thing in the sidebar. No help card.

8. The green load bars do not look finished

Mentor cards use a thin glowing track (“17 / 30”), and the same treatment is on the dark Program pulse frame. They read as generic sliders.

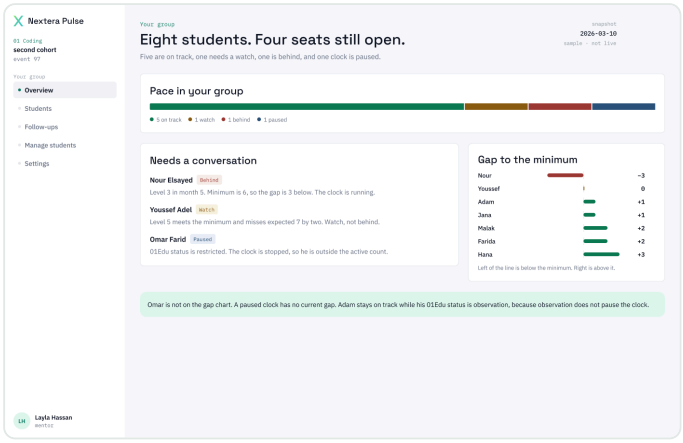

Use the Student pace line: a thin track with ticks for minimum, expected, level, and checkpoint. For a group, use the one segmented bar on the Mentor overview (on track, watch, behind, paused), then a written list. Not a slider on every mentor card.

CURRENT · A BAR ON EVERY MENTOR

Dark repo, Program pulse. A separate track on Layla, Omar, and Hana.

TARGET · ONE BAR, THEN NAMES

One bar for the group. The people who need a conversation are a list, with the reason under each name.

9. Remove the profile page

My profile is a photo, a quote, and “Make your workspace feel like yours.” Mentor, Product, and Phone do not use it as a workspace page. Remove the page and the nav item. Keep the name in the account chip only.

The Student desktop frame still lists My profile. Leave it out there as well, so the nav matches Mentor and Phone.

CURRENT · MY PROFILE

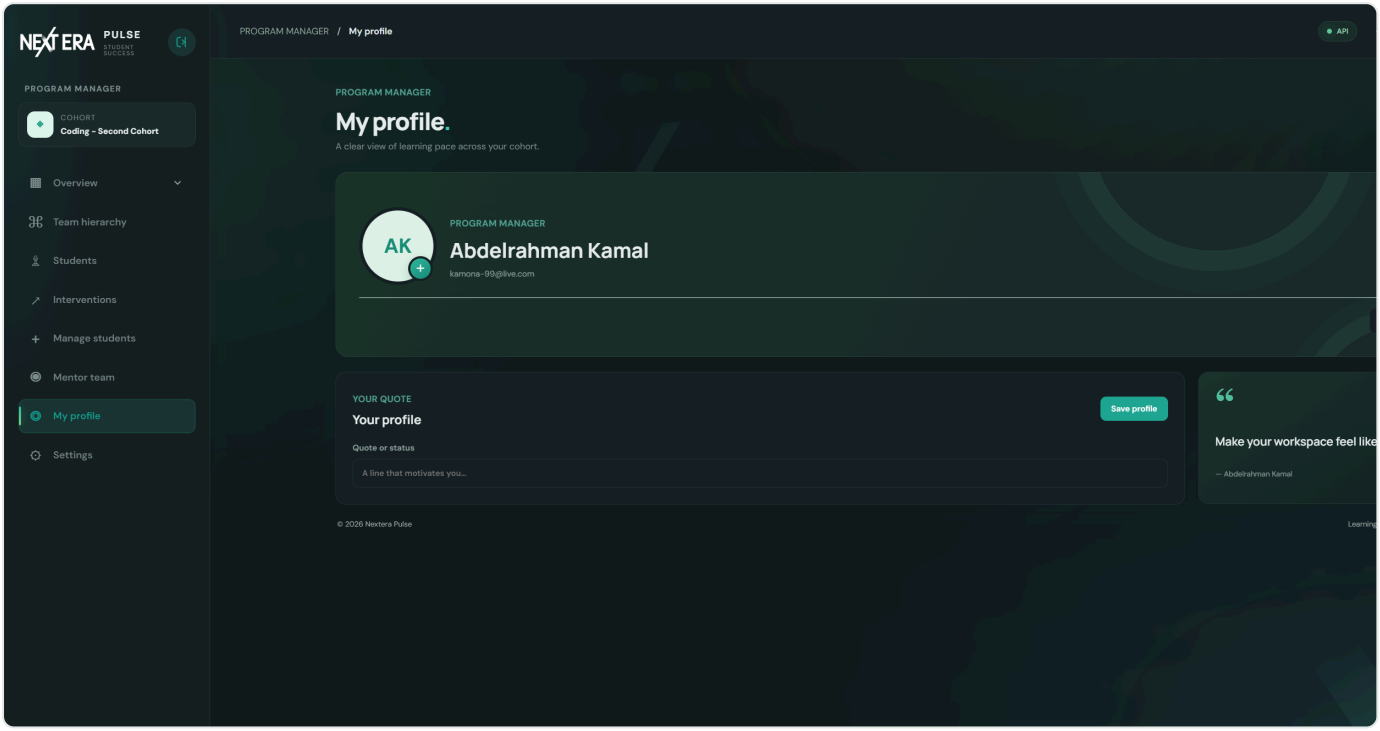

Photo upload, a quote, and “Make your workspace feel like yours.” This page is not part of the mentor or program workflow.

10. Demo wording, and numbers that disagree

The dark repo overview still says “Demo data”. Settings still says live records are coming later. The live top bar badge says “API”, which is a developer label.

The four summary cards count active students only. The pace chart counts everyone, including paused, so “On track” on the cards will not match “On track” in the chart. “Students needing attention” stops at five names.

The Mentor overview shows the people who need a conversation in one list, with the reason under each name, and it does not cut the list off at five. The summary cards and the chart should use the same population, and the label should say which population that is.

Order

1. Save follow-up removal and unassign through the API. Remove Help and My profile.
2. Histogram by level, and projects as a named set.
3. Sidebar: full or hidden on a laptop. Bottom bar on a phone. One logout control.
4. Replace the load bars. Align the layouts to the light frames. Meet in person if a screen is still unclear.
5. Drop the demo wording, and make the summary cards, the pace chart, and the attention list use the same rules.

Shots of the running app were taken from the local dashboard on 12 November 2026. Figma frames are from Nextera Pulse — Learning workspace, file GJwqOFWHm7hfFIUEmOO6Wy.
